loading in Tetragon to something that is natively supported and works on all supported platforms.

I just don't like the awkwardness and fragmentation of HTML5's and Javascript's nature.

The problem however remains: None of these technologies provide an attractive and compact multi-platform solution like the Flash platform does.

Adobe's de facto monopoly claim on the Flash platform has always been a risk lurking at the horizon and now it has come close enough to bite us in the rear end.

only would work! The Future of Tetragon Posted by hexagonstar on November 15, 2011 2

Time will tell how Adobe progresses with the AIR platform but I hope they don't spoil that one too.

HTML5 is taking over the RIA world and I have no problem with it.

If you would try to play the sound later it's not going to work.

But enter iOS where it's strictly forbidden to execute any non-native scripts and the whole idea falls apart as not even the creation of an in-memory SWF structure is allowed there, you will simply get an exception thrown and end up with no sound in your application.

Flash and in particular AIR provided everything I ever wanted for game development, sans hardware 3D but we got that recently, too.
