Collateral damage doesn t seem to matter for them.

But the Flex framework is a very attractive solution for building desktop and mobile apps via AIR and Adobe has added several mobile-optimized UI components to the framework just recently.

This is all a very sad state of affairs! whoever implemented (unplemented suits better here) the new sound API was either not given any time to finish it, or had absolutely no sense or concept on how to do this right.

But have they asked the Flash programmers if we actually want to have Flash exchanged with HTML5.

It s the most farthest away thing from a classic programming paradigm and it s everything I never wanted to touch since I learned programming.
